Main Points

- A total of 124 surveys were mailed with 67 (54%) returned.
- Seventy-seven percent of Anchorage providers returned surveys compared to 47% for all other areas of the State.
- Providers in Juneau (+96) and Anchorage (+287) reported the largest increase in cases compared to the Winter 2001 homeless survey.
- Providers reported a total of 2,023 unduplicated cases which was an increase of 437 from the Winter 2001 survey. Approximately 123 of these cases, or 6% were reported by 15 agencies that did not participate in the last Winter survey.
- The percentage of homeless families reported in Winter surveys has grown approximately 7% since the last Winter survey and approximately 18% since the Winter 2000 survey.
- In Anchorage, Small (2-3 Members) families experienced the largest growth (5.0%).
- The percentage of homeless with a disability has remained relatively stable, hovering within 3% of 29%.
- Substance abuse appears to be trending downward since peaking close to 42% in the Winter 2000 survey.
- The percentage of homeless immigrating to Kodiak from outside Alaska has dropped by about 10% over the last two years.
- In Palmer and Wasilla, the percentage of homeless individuals and large family (4+) households living with another family, not by choice, has trended upward over the last two years.
- In Fairbanks, the percentage of homeless large families has declined although the percentage of these families with a disability and or substance abuse has risen.

Introduction

The Homeless Service Providers Survey is a “*point-in-time estimate*” completed by service providers semiannually on a predetermined day. The purpose of the survey is to gather demographic information on the homeless who receive services from particular homeless agencies at “any given point in time.”

The Homeless Service Providers Survey defines homelessness based on standard established by the Department of Housing and Urban Development and the Alaska Housing Finance Corporation. For the purposes of this survey, the definition of “homeless” includes:

- *Any individual who lacks a fixed, regular, and adequate nighttime residence or has a primary nighttime residence in any facility not designed for permanent living.*
- *Families, individuals, and youth residing in emergency shelter or transitional housing.*
- *Persons in drug and alcohol treatment who were homeless before they entered treatment or will be homeless after they leave treatment.*
- *Family members wait-listed for public housing that are currently residing in substandard or overcrowded housing.*
- *Individuals discharged from correctional institutions within 30 days of the survey date that would meet the definition of being homeless.*

Limitations

Please note that homeless surveys attempt to define a segment of the population that is dynamic and not easily identified or understood. There are many factors that generally limit the validity of such studies. Users of homeless surveys need to carefully examine the work done and consider the following limitations of all homeless research. **The results of the survey are not intended to represent the entire homeless population and the reader is cautioned against making such generalizations.** Please note that the results of this survey, as well as other homeless surveys, are generally limited by a variety of factors including:

1) Self-report:

Homeless surveys depend on self-disclosure and assume that people understand what it means to be homeless and furthermore, that people are comfortable in reporting self-characteristics that may be perceived as socially undesirable, such as mental illness or substance abuse.

2) Overestimation

Homeless surveys can overcount the number of homeless seeking services by not considering or controlling for duplication within and across agencies.

3) Generalizing to the Entire Homeless Population

Homeless surveys often attempt to make generalizations about the entire population from limited samples of shelters and food kitchens. It is important to note that homeless may also be found in domestic violence shelters, libraries, cars, parks, or other nontraditional locations.

4) Rural Factors

It is important to point out that there are pronounced differences between urban and rural areas when it comes to homelessness. While urban communities often have shelters, day centers, and food kitchens for the homeless, rural communities may lack these facilities. The absence of these facilities can result in reports which may incorrectly conclude that rural areas do not have a homeless problem. A rural community often relies on non-traditional shelter arrangements to take care of the homeless. Many persons in rural areas without a home may board with friends or relatives in substandard or overcrowded housing.

Method

Data Collection

Twice a year, surveys are mailed to 124 homeless agencies throughout the State of Alaska. Agencies are asked to report on the demographics on all the homeless families and individuals who request services on the date of the survey, including those who are ineligible to receive services and those who cannot be served because of capacity issues. For the past two years, the survey has been administered on the last Wednesday of July and January. Note that in some cases, agencies submit homeless client data not collected on the required survey dates. These data are generally not included with the results of the survey unless it can be concluded with a reasonable amount of certainty that the cases reported were homeless on the required survey dates. Agencies may also submit client data where there is some question as to whether or not the reported individuals or families are actually homeless. In these circumstances, agencies are contacted to clarify if the cases meet the survey's definition of homeless.

Data Analysis

Data gathered from homeless agencies are entered into a database and subjected to a missing case and duplicate analysis. **Missing cases are generally excluded from demographic trends and patterns reported in this report. Duplicates across homeless agencies for the specific survey are excluded** and also excluded from the trends and patterns reported in this survey. However, duplicates with prior surveys are included and analyzed to identify the differences between infrequent users of homeless services vs. frequent users.

Data collected over the last seven years indicate fundamental differences between Winter and Summer surveys with respect to agency participation and the demographics of the homeless reported. Because of these factors, Winter survey trends are derived only from Winter survey data whereas Summer survey trends are derived only from Summer survey data.

The constantly changing nature of homeless agency participation in the Homeless Service Providers' Survey results in demographic statistics that are extremely variable. This is especially the case in rural Alaska where just one agency can significantly change the demographic profile of the homeless. Because of this, **percentages are calculated from moving averages**. Moving averages provide a clearer picture of the long-term trends in the homeless population from which inferences can be made.

Participation

A total of 124 surveys were mailed to homeless agencies and housing providers. Sixty-seven surveys (54%) were returned. Seventy-seven percent of Anchorage providers returned surveys compared to 47% for all other areas of the State. Providers in Juneau (+96) and Anchorage (+287) reported the largest increase in cases compared to the Winter 2001 homeless survey.

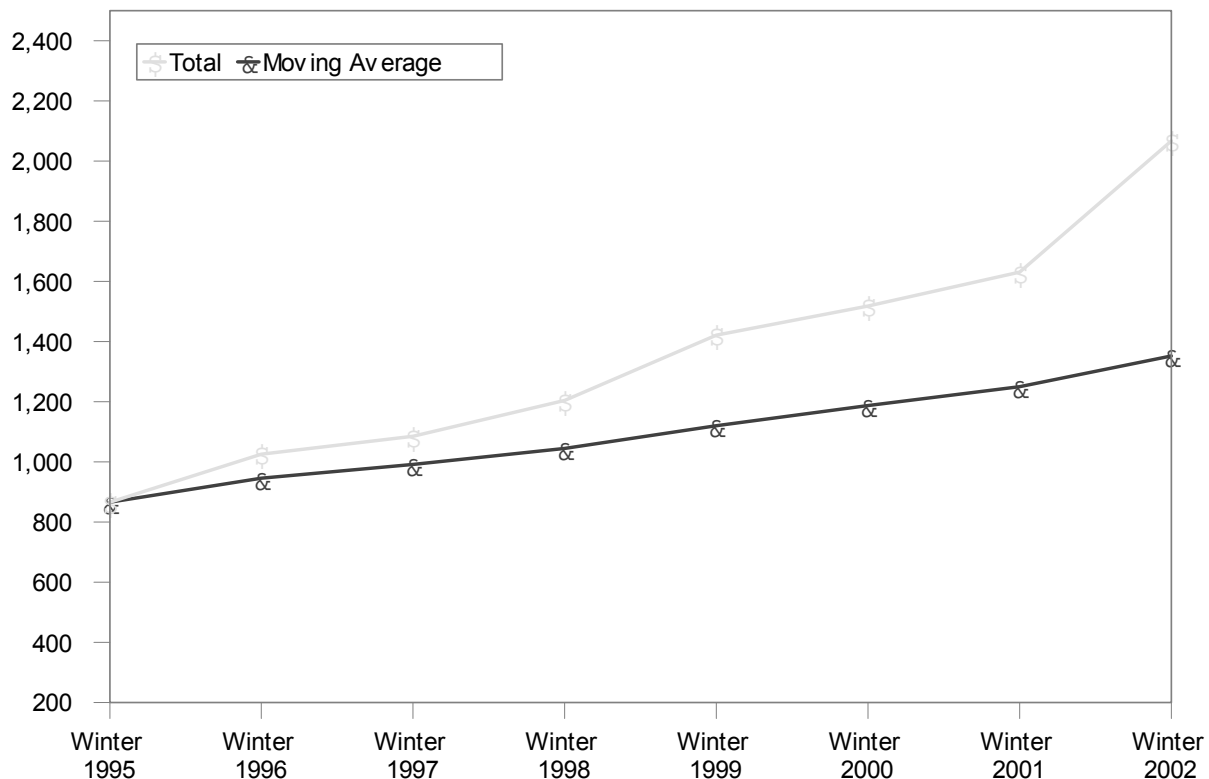

Providers reported a total of 2,023 unduplicated cases which was an increase of 437 from the Winter 2001 survey. Approximately 123 of these cases, or 6% were reported by 15 agencies that did not participate in the last Winter survey. It's estimated that 94 cases would have been reported by 5 agencies that participated in the Winter 2001 survey but not the Winter 2002 survey. The moving average trend for the number of unduplicated homeless reported grew 8% to 1,353.

Unduplicated Cases Reported By Agencies

Total vs. Moving Average

January 2002

Table 1

Households

Adult individuals represent the majority of homeless reported through the State. However, moving average trends indicate that the percentage of homeless families reported in Winter surveys has grown approximately 7% since the last Winter survey and approximately 18% since the Winter 2000 survey. In Anchorage, Small (2-3 Members) families experienced the largest growth (5.0%). Providers have linked this growth to an increasing number of families who are unable to locate affordable housing in a tight rental market. This is also supported by the increasing number of homeless Anchorage families reported on AHFC's wait list for public housing which has risen from 95 in the Winter 2001 survey to 192 in the Winter 2002 homeless survey.

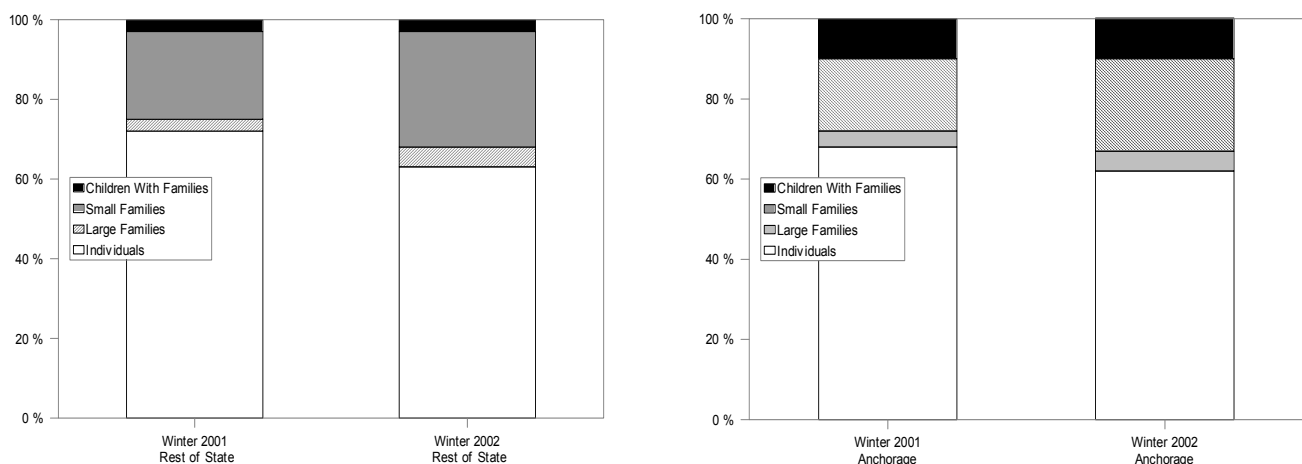

Outside of Anchorage, the growth in Large and Small families has been dramatic, rising 7% and 3% respectively. This change appears to be a result of a large increase in the number of homeless families in Juneau. Juneau providers have reported that an increasing number of younger households, who because of cost or rent history, are having difficulty finding housing. Young households represented approximately 36% of the total number of households reported in Juneau.

The representation of families among the homeless may rise in the next year. Rising rents and utility costs are expected to place a greater burden on families struggling to maintain housing stability. Large families (4+ members) may experience the greatest increase in representation among the homeless. According to service providers, rising rents and lack of supply have been significant barriers for these families. For example, in the community of Anchorage from 2000 - 2001, the average cost of a 3 bedroom unit rose 2% while the total number of these vacant units dropped 2%.

Household Composition

January 2001 vs. January 2002

Table 2

Race/Ethnicity

The overall ethnic/racial composition of the homeless changed very little since the Winter 2001 survey. Slight changes were reported in the racial categories of Alaska Native/American Indian, White, and Asian/Pacific Islander. However, these changes were not of enough magnitude to fundamentally change the racial profile of the homeless.

While the racial group representation of Asian/Pacific Islanders has generally been low among the homeless, this survey marks the first time that less than one percent of the homeless reported were Asian. The decrease in this racial group has been most pronounced outside of Anchorage where the percentage representation of Asian/Pacific Islanders among the general population is less than one percent. However, it is difficult to link this decrease to any specific trend due to the percentage of cases missing data on race/ethnicity (1.5%). It is possible that a larger percentage of Asian/Pacific Islander homeless did not disclose race in this survey.

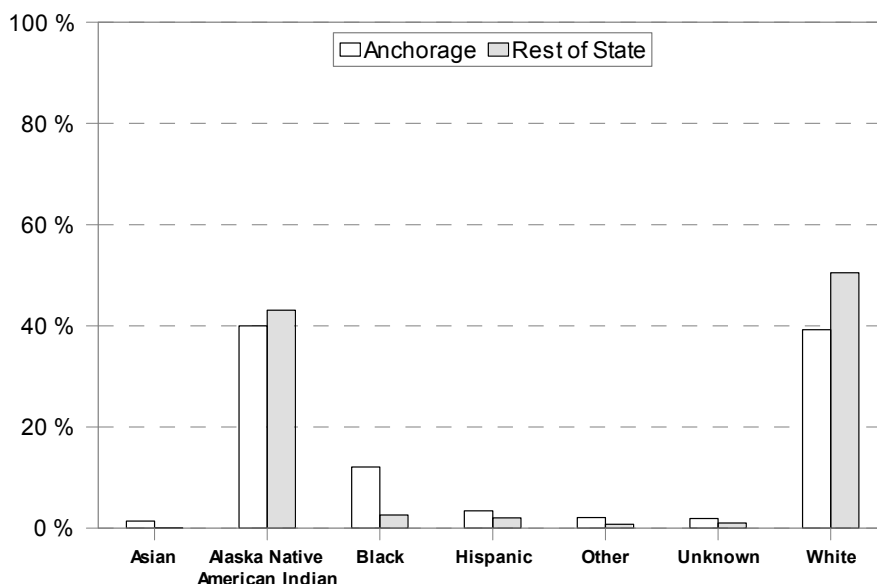

On average, families represent 35% of the total homeless reported. However, there were several pronounced differences in household representation across several ethnic groups. Families represented 51% of all households of mixed race and 42% of all homeless Hispanics. In terms of age by race, white homeless were the oldest at an average of 36 years. Alaska Native/American Indian individuals and large-family head-of-household were generally older than other individuals and large families. Mixed race and African-American homeless reported having the youngest small-family head-of-household.

Representation of Racial Groups

Anchorage vs. Rest of State

January 2002

Table 3

Communities

Kodiak

The community of Kodiak has reported a gradual change in the demographics of the homeless. Over the last two years, the percentage of reported individuals, under the age of 30, has declined. Additionally, the percentage of homeless immigrating to Kodiak from outside Alaska has dropped by about 10% while the percentage of homeless who reside in Kodiak is up 15%. There is an increasing percentage of middle-aged males who report substance abuse problems or disability. Homeless service providers have linked this change to a decline in the Seafood Processing Industry which continues to shed jobs. With a strong healthy economy in the lower-48 and fewer seasonal work prospects in Alaska, the incentive to work in Alaska has lost its luster. Because transient workers have traditionally used Kodiak homeless services, their decline has resulted in changes in the Kodiak homeless profile.

Matanuska-Susitna Valley

Providers in Palmer and Wasilla have expressed concern about a tightening rental market and its potential impact on the homeless population. Generally, the number of homeless reported in the Mat-Su Valley has remained stable over the past two years, however, the percentage of individuals and large family (4+) households living with another family, not by choice, has trended upward over the last two years. While the percentage increase for individuals appears proportional to the increase in their overall number, the percentage of large families doubled up has increased while their representation among the population has not. This change appears to be related to the tightening of the rental market in the Valley for larger-bedroom size units. Rental-vacancy rates for 3 and 4 bedroom units have declined by an average of 10% from 2000 to 2001 and the average rental costs of these units has correspondingly increased by 7%.

Fairbanks

The composition of the homeless in Fairbanks has moved in a direction opposite of most other communities. The percentage of families among the homeless has dropped over 30% in the last five years while individuals have risen. While large families have declined the percentage with a disability and or substance abuse has risen, suggesting that complex problems are impeding their transition to housing. Rental market trends in the city of Fairbanks indicate a substantial tightening of available 0 bedroom units which may explain the upward trend in individual homeless.

Disabilities

Despite a slight rise in the Winter 2000 Homeless survey, the percentage of homeless with a disability has remained relatively stable, hovering within 3% of 29%. Anchorage reported a moving average percentage of 24% while the rest of state 34%. Anchorage typically reports a lower rate of disability, 7-10% lower, although the variation in percentage is much higher in rural areas to large changes in participation. Individuals aged 35-64 represent close to 70% of the homeless with a disability. This has changed very little since the Homeless Service Providers Survey started in 1993

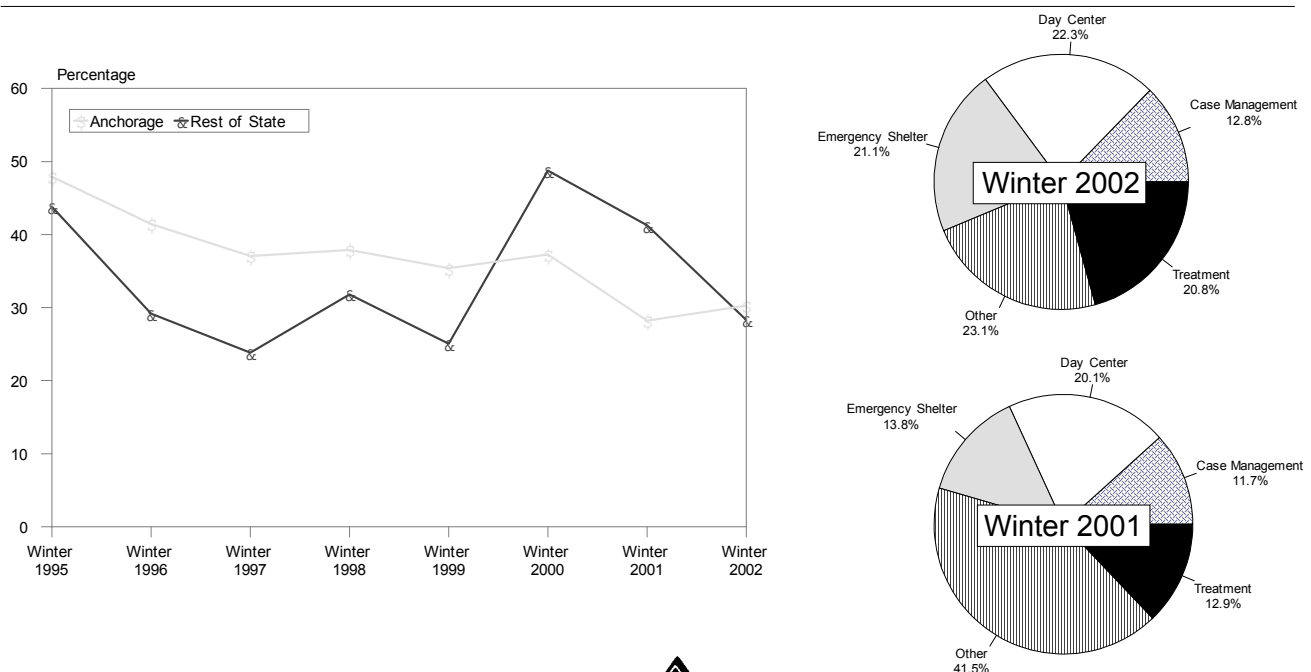

Substance abuse appears to be trending downward since peaking at a moving average of close to 42% in the Winter 2000 survey. The greatest change appears to have occurred in areas outside of Anchorage where substance abuse has dropped as much as 20% over the last two years. Approximately 14% of those with substance abuse also reported a disability. This percentage is very similar in Anchorage and the rest of the State. This percentage has moved downward since Winter 2000, but appears to have stabilized over the past two surveys, The majority of homeless with substance abuse problems continue to be reported by day centers and emergency shelters (43%). However, an increasing percentage are being reported by drug and alcohol treatment facilities - 21% vs. 13%. As noted in the *Introduction*, persons in substance abuse treatment during the survey are reported if they were homeless when they entered treatment or are expected to be homeless after completing treatment.

Substance Abuse Reported

- Notes:**
- Refers to the change due to participation caused by: 1) An agency participating in last seasonal survey, but not current survey or 2) Change due to an agency not participating in last seasonal survey, but participating in current survey
 - Cases for which demographic variable is unknown, excluded from percentage calculations.
 - Refers to cases lost due to an agency participating in last seasonal survey, but not current survey
 - Refers to cases gained due to an agency not participating in last seasonal survey, but participating in current survey
 - Refers to the total sum of household size, may overestimate homeless because homeless members of a household may be counted more than once. Without individual demographic data on each household member, duplicates cannot be ruled out.

Notes:

1. Refers to the change due to participation caused by: 1) An agency participating in last seasonal survey, but not current survey or 2) Change due to an agency not participating in last seasonal survey, but participating in current survey
2. Cases for which demographic variable is unknown, excluded from percentage calculations.
3. Refers to cases lost due to an agency participating in last seasonal survey, but not current survey
4. Refers to cases gained due to an agency not participating in last seasonal survey, but participating in current survey
5. Refers to the total sum of household size, may overestimate homeless because homeless members of a household may be counted more than once.
Without individual demographic data on each household member, duplicates cannot be ruled out.

Notes:

- Refers to the change due to participation caused by: 1) An agency participating in last seasonal survey, but not current survey or 2) Change due to an agency not participating in last seasonal survey, but participating in current survey
- Cases for which demographic variable is unknown, excluded from percentage calculations.
- Refers to cases lost due to an agency participating in last seasonal survey, but not current survey
- Refers to cases gained due to an agency not participating in last seasonal survey, but participating in current survey
- Refers to the total sum of household size, may overestimate homeless because homeless members of a household may be counted more than once. Without individual demographic data on each household member, duplicates cannot be ruled out.
- Percentages are calculated from moving averages

Notes:

1. Refers to the change due to participation caused by: 1) An agency participating in last seasonal survey, but not current survey or 2) Change due to an agency not participating in last seasonal survey, but participating in current survey

2. Cases for which demographic variable is unknown, excluded from percentage calculations.

3. Refers to cases lost due to an agency participating in last seasonal survey, but not current survey

4. Refers to cases gained due to an agency not participating in last seasonal survey, but participating in current survey

5. Refers to the total sum of household size, may overestimate homeless because homeless members of a household may be counted more than once.

Without individual demographic data on each household member, duplicates cannot be ruled out.

Notes:

- Refers to the change due to participation caused by: 1) An agency participating in last seasonal survey, but not current survey or 2) Change due to an agency not participating in last seasonal survey, but participating in current survey
- Cases for which demographic variable is unknown, excluded from percentage calculations.
- Refers to cases lost due to an agency participating in last seasonal survey, but not current survey
- Refers to cases gained due to an agency not participating in last seasonal survey, but participating in current survey
- Refers to the total sum of household size, may overestimate homeless because homeless members of a household may be counted more than once.
Without individual demographic data on each household member, duplicates cannot be ruled out.

Notes:

1. Refers to the change due to participation caused by: 1) An agency participating in last seasonal survey, but not current survey or 2) Change due to an agency not participating in last seasonal survey, but participating in current survey
2. Cases for which demographic variable is unknown, excluded from percentage calculations.
3. Refers to cases lost due to an agency participating in last seasonal survey, but not current survey
4. Refers to cases gained due to an agency not participating in last seasonal survey, but participating in current survey
5. Refers to the total sum of household size, may overestimate homeless because homeless members of a household may be counted more than once. Without individual demographic data on each household member, duplicates cannot be ruled out.
6. Percentages are calculated from moving averages
